

Reconcile Agent

Agentic invoice-to-bank reconciliation
with human-in-the-loop

Accurate. Auditable. Time-saving.

Manual matching quietly consumes the week

5–10

minutes / invoice

100+ invoices = 8–16 hours every week

Mismatched amounts, wrong vendors and missed payments create delays, vendor friction and a month-end bottleneck.

A measurable return for every finance team

8+

hours saved / week

\$10K

estimated annual labor savings

95%

matching accuracy

Fewer errors → faster payment cycles → a calmer close

Rules where certainty matters. Reasoning where it helps.

BASELINE

Exact amount $\pm \$0.01$ • Vendor similarity >85%

ADVANCED

LangGraph • Retrieval • Gemini reasoning •
Deterministic confidence

Each iteration removes a different failure mode

Accuracy rises while human review falls

Ambiguity is surfaced—not hidden

ACME CORP	→ Acme Corporation	Vendor alias resolved	0.97
\$2,480.00	→ \$2,468.75	Fee / FX variance explained	0.96
\$1,500 invoice	→ \$1,000 payment	Partial payment flagged	REVIEW

A controlled agent graph with an explicit escape hatch

Every candidate, reason, override and decision is written to the audit trail.

Prove value in a focused pilot

DEMO SIGNAL

0.98

Invoice #1 auto-matched correctly—fuzzy alternatives ignored.

02

Connect invoice + bank data

03

Train the review workflow

Questions? Let's discuss your reconciliation flow.

Technical implementation

Setup instructions, API usage and test examples for technical teams and integrators.

From clone to health check in four steps

PREREQUISITES

Python 3.11+

Poetry

Gemini API key

Git

SETUP

1 `git clone <repo>`

2 `poetry install`

3 `set GEMINI_API_KEY`

4 `poetry run server`

Testing and `/health` endpoints are available after startup.

Five endpoints cover the core integration loop

POST	/upload/invoices	Upload CSV invoice files
POST	/reconcile/{invoice_id}	Run reconciliation; toggle advanced mode
GET	/review/queue	List matches needing human review
PUT	/review/{match_id}	Approve or reject with notes
GET	/health	Service health status
